

Stephen Moye

WEB DESIGNER & DEVELOPER

ABOUT ME

My name is Stephen Moye. I am a web designer and developer located in southern California.

My skills are in web design and front end development. I use HTML, CSS/Sass, JavaScript, Node.js, NPM, Grunt, Git, Photoshop and Illustrator. I also use other technologies if they can better solve the problem at hand.

I am looking to build and improve web-based media. I enjoy working with others, taking feedback, and problem solving.

EXPERIENCE

NBCC

May 2015 – Present

Front End Web Developer

I design, code and maintain the websites for the organization. I mostly use Sass, CSS, HTML, JavaScript, Gulp and Photoshop.

NBCC's old site was a table based layout with inline styles and images for text. I rebuilt the site from the ground up. The new site includes real text and a responsive, modern look with a social media carousel. I also integrated a payment system to take donations and pay for classes and events.

Monkey Sports Inc.

August 2012 – Present

E-Commerce Department Lead

I oversee the department employees and delegate projects to build product pages for multiple Magento based eCommerce stores. We merchandise millions of dollars in new stock on a quarterly basis.

I also create landing pages, marketing material, and email blasts for weekly promotions. Using Google analytics, I observe customer data to create a more optimal user experience.

This year, I oversaw and coordinated the migration of over 10,000 products from our old store platform to Magento. The switch was a success; we were able to launch without affecting sales.

Watermelon Web Works

May 2011 – Feb 2012

Web Designer

I created websites and WordPress builds based on client request. I used HTML, CSS, JavaScript, jQuery and PHP. Each site underwent cross-browser testing to ensure a consistent user experience.

I upgraded old site designs and transferred them over to a CMS. We also used SEO strategies to help the client's site rank higher on search engines.
